

PROJECT NAME

Incident Lifecycle Automation in ServiceNow

PHASE 2 – Create New Service & Service Offering

Phase Objective

The objective of Phase 2 is to create and configure the required Service and Service Offering records in ServiceNow. These records provide the service structure needed for incident management, classification, assignment, tracking, and resolution.

1. Create New Service

If you have admin access, create the service.

Steps to Create New Service

1. Go to **All**.
2. Search for **cmdb_ci_service**.LIST.
3. Click **New**.
4. Fill in the required service details.
5. Enter the service name as **Remote Access**.
6. Set the operational status to **Operational**.
7. Review the entered information and click **Submit**.

Service Details

- **Name:** Remote Access
- **Operational Status:** Operational

2. Create New Service Offering

After creating the Remote Access service, create a service offering associated with it.

Steps to Create New Service Offering

1. Go to **All**.
2. Search for **service_offering**.LIST.
3. Click **New**.
4. Fill in the required service offering details.
5. Enter the service offering name as **Corporate VPN**.
6. Select **Remote Access** as the parent/service.
7. Set the operational status to **Operational**.
8. Review the details and click **Submit**.

Service Offering Details

- **Name:** Corporate VPN
- **Parent Service:** Remote Access
- **Operational Status:** Operational

3. Phase 2 Milestones

- Milestone 1: Create New Service – Remote Access
- Milestone 2: Create New Service Offering – Corporate VPN
- Verify the service and offering details.
- Submit and validate the records in ServiceNow.

4. Phase 2 Outcome

The Remote Access service and Corporate VPN service offering are configured in ServiceNow. This completes the service setup required for the next phases of the Incident Lifecycle Automation project.

5. Conclusion

Phase 2 establishes the required service and service offering structure in ServiceNow. The configuration supports consistent incident handling and provides a foundation for the remaining incident lifecycle automation activities.
