

# Incident Lifecycle Automation in ServiceNow

## PHASE 7: INCIDENT TRACKING BY LEVEL 2

### Objective

Phase 7 focuses on Level 2 investigation and tracking of the VPN incident. The Network team reviews the incident details, checks the available knowledge information and SLA status, and takes ownership so that the issue can be investigated and resolved efficiently.

### Description

- 1 **Impersonate David Loo** to work as the Level 2 support user.
- 2 Select the **three dots** on the banner and choose **Workspaces**.
- 3 Navigate to **Service Operations Workspace > Incidents > Open**.
- 4 Open the VPN incident that was created and classified in the earlier phases.
- 5 Click **Assign to me** so the Network team member takes ownership of the incident.
- 6 Verify that the **incident description** is visible and contains the required problem details.
- 7 Verify that the relevant **Knowledge Articles** are visible for troubleshooting and resolution.
- 8 Verify that the **SLA** information is displayed in the **Task SLAs** section under Related Records.
- 9 Review the incident information and continue the investigation according to the Network support process.

### Level 2 Investigation

After the incident is assigned to the Network team, Level 2 support examines the reported VPN connectivity problem in greater detail. The team uses the incident description, knowledge resources and SLA information to understand the issue, prioritize the work and proceed with troubleshooting.

### SLA Tracking

SLA tracking helps the support team monitor whether the incident is being handled within the agreed service timeframe. Reviewing Task SLAs ensures that response and resolution targets remain visible during investigation.

### Expected Result

The VPN incident is successfully assigned to the Level 2 Network support user. The incident description, knowledge articles and SLA details are verified, allowing the Network team to continue investigation and resolution.

### Phase 7 Outcome

This phase demonstrates effective Level 2 incident tracking by transferring ownership to the appropriate Network support resource while maintaining visibility of troubleshooting knowledge and SLA commitments.
